Gregory Burns

SENIOR FULL-STACK ENGINEER

gregburns74@gmail.com · (541) 819-0321 · Seal Rock, OR · linkedin.com/in/gregory-burns-4ba14a4

Full-stack engineer who owns the customer surface: the app people click and the API they pay for. Production React/TypeScript, Python APIs, authentication, rate limiting, and the billing-adjacent work that turns an endpoint into a product. Led an SBA customer portal; previously CTO at a small company, shipping the dashboard, public site, and authenticated API without a platform team. Authorized to work in the US for any employer.

SKILLS

Frontend: TypeScript, JavaScript, React, HTML/CSS, Vue.js
Backend: Python, REST APIs, JWT/auth, MySQL, Postgres/RDS, DynamoDB, PHP (Laravel)
APIs & delivery: API keys, rate limiting, webhooks, AWS (Lambda, API Gateway, S3, CloudFront, RDS), Docker, CI/CD
Quality & leadership: Jest, Playwright, ESLint, SonarQube · small-team ownership, remote coordination

EXPERIENCE

Senior Full Stack Engineer — Makpar Corp (US SBA contract), Remote — Oct 2023 – Oct 2024

- Led a React/TypeScript customer portal with a Python API on AWS (API Gateway, Lambda, RDS/DynamoDB) for an SBA-facing system that had to be correct when nobody was watching.
- Treated auth and throttling as product, not plumbing: JWT, API Gateway authorizers, and rate limits on a public-facing API.
- Performance work on image-heavy lists so the UI stayed fast and readable under load; CI/CD with Jest, Playwright, and SonarQube.

Senior Full Stack Engineer — GSATi, Remote — Mar 2022 – Sep 2023

- Maintained a messy early codebase (legacy PHP/Laminas), integrated AWS serverless, shipped a Commerce7 plugin, and closed issues against live customer systems without a large platform team.

Senior Full Stack Engineer — Moxxi Marketing, Remote — Jan 2021 – Mar 2022

- Rebuilt a Laravel site with two-way Magento integration and AWS-hosted infrastructure; inventory tool talking to multiple external APIs.

Senior Full Stack Engineer — Filter Easy, Remote — Aug 2020 – Feb 2021

- Modernized an eCommerce platform as a Laravel + Vue.js SPA, including white-label and pricing rules that had to stay consistent in the UI and the API.

Senior Full Stack Engineer — iRemedy, Remote — Oct 2019 – Jul 2020

- Refactored a FuelPHP CRM to Laravel; built a Python scraper and ran Magento storefronts.

Senior Full Stack Engineer — Ronati, Remote — Mar 2019 – Oct 2019

- Laravel inventory sync for marketplace vendors: validation, idempotent writes, ship-under-deadline. Magento storefronts and Docker CI/CD.

Full Stack Engineer — Calltext, Remote — Dec 2016 – Nov 2018

- Custom CRM on Twilio and SendGrid with webhooks and Redis rate limiting so outbound traffic stayed inside provider quotas. Led a remote team behind one authenticated surface.

Full Stack Engineer — ChipMonk Technology, Remote — Aug 2016 – Dec 2016

- Product search and internal tools on Laravel + Redis; AWS-hosted storefront with an emphasis on UX.

CTO — Red Pocket Mobile, Remote — Apr 2009 – Jan 2015

- Grew from engineer to CTO of a 5-person team. Owned the systems customers actually used — CRM, storefronts, AWS infra — rather than a slice of a large platform org.

EDUCATION & MILITARY

B.S. Computer Science, University of Phoenix, 1995–2005

U.S. Army, Satellite Communications Operator (Top Secret clearance), 1993–1999
